

## 24 MHz, 2.5 mA Op Amps

### Features:

- Gain Bandwidth Product: 24 MHz (typical)
- Short Circuit Current: 70 mA (typical)
- Noise: 10 nV/ $\sqrt{\text{Hz}}$  (typical, at 1 MHz)
- Rail-to-Rail Output
- Slew Rate: 10 V/ $\mu\text{s}$  (typical)
- Supply Current: 2.5 mA (typical)
- Power Supply: 2.5V to 5.5V
- Extended Temperature Range: -40°C to +125°C

### Typical Applications:

- Driving A/D Converters
- Power Amplifier Control Loops
- Barcode Scanners
- Optical Detector Amplifier

### Design Aids:

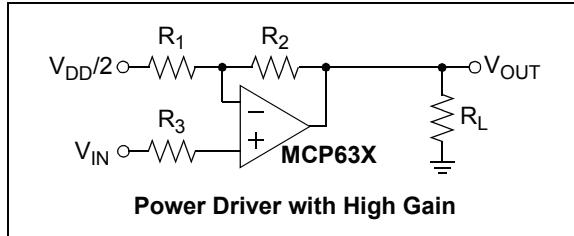

- SPICE Macro Models
- FilterLab® Software
- Microchip Advanced Part Selector (MAPS)
- Analog Demonstration and Evaluation Boards
- Application Notes

### Description:

The Microchip Technology, Inc. MCP631/2/3/4/5/9 family of operational amplifiers features high gain bandwidth product (24 MHz, typical) and high output short circuit current (70 mA, typical). Some also provide a Chip Select pin ( $\overline{\text{CS}}$ ) that supports a low-power mode of operation. These amplifiers are optimized for high speed, low noise and distortion, single-supply operation with rail-to-rail output and an input that includes the negative rail.

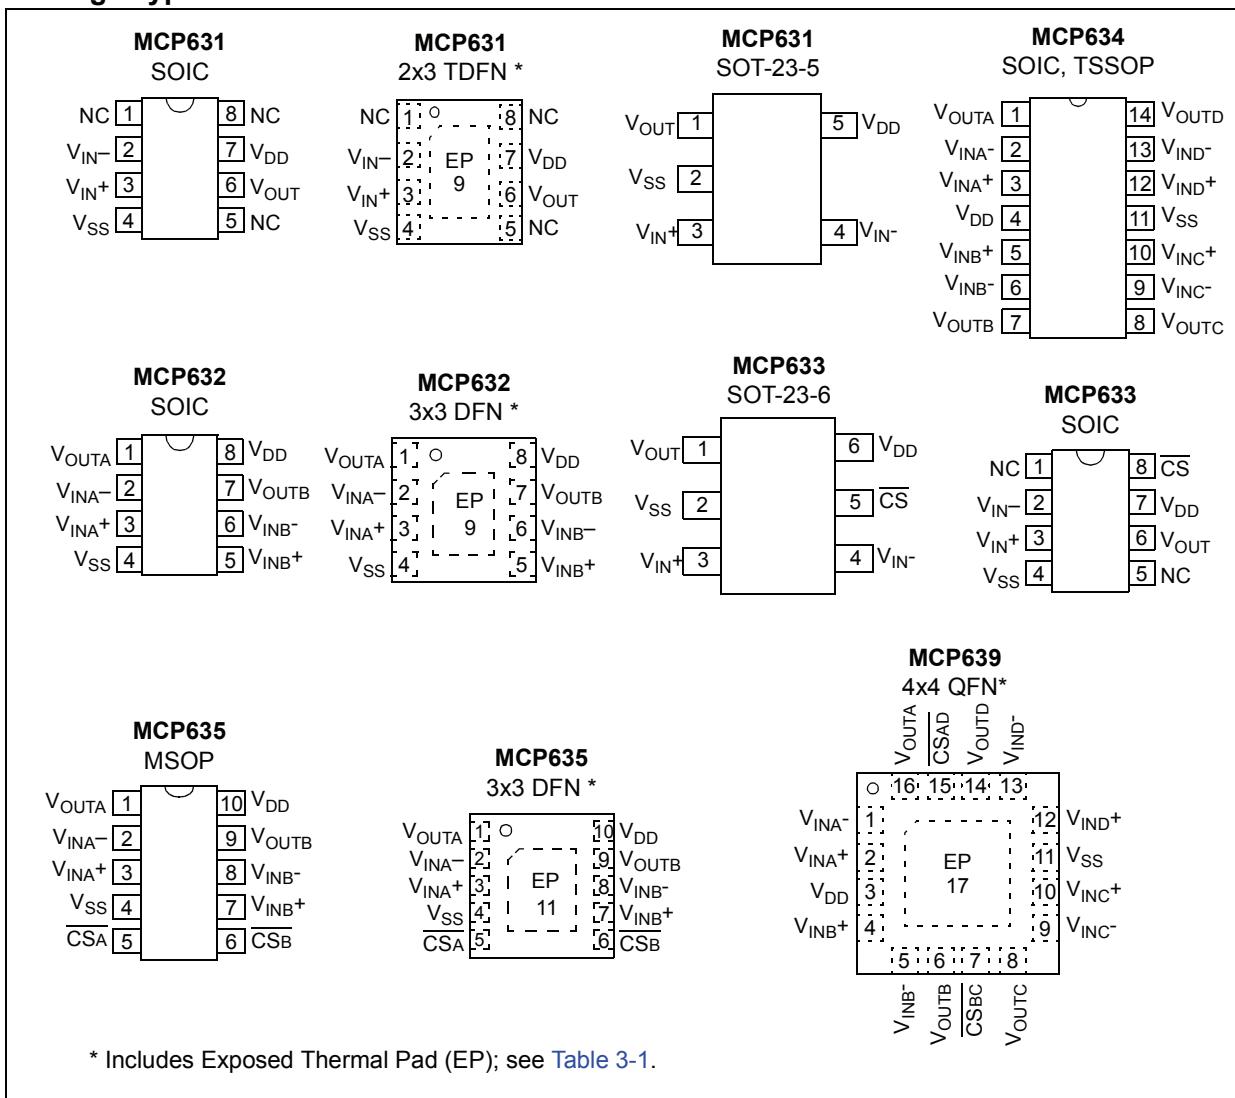

This family is offered in single (MCP631), single with  $\overline{\text{CS}}$  pin (MCP633), dual (MCP632), dual with two  $\overline{\text{CS}}$  pins (MCP635), quad (MCP634), and quad with two Chip Select pins (MCP639). All devices are fully specified from -40°C to +125°C.

### Typical Application Circuit

# MCP631/2/3/4/5/9

## Package Types

\* Includes Exposed Thermal Pad (EP); see [Table 3-1](#).

## 1.0 ELECTRICAL CHARACTERISTICS

### 1.1 Absolute Maximum Ratings †

$V_{DD} - V_{SS}$	.....	6.5V
Current at Input Pins	.....	$\pm 2$ mA
Analog Inputs ( $V_{IN+}$ and $V_{IN-}$ ) ‡‡	$V_{SS} - 1.0V$ to $V_{DD} + 1.0V$	
All other Inputs and Outputs	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$	
Output Short Circuit Current	.....	Continuous
Current at Output and Supply Pins	.....	$\pm 150$ mA
Storage Temperature	.....	-65°C to +150°C
Max. Junction Temperature	.....	+150°C
ESD protection on all pins (HBM, MM)	.....	$\geq 1$ kV, 200V

† **Notice:** Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

‡‡ See [Section 4.1.2 "Input Voltage and Current Limits"](#).

### 1.2 Specifications

**TABLE 1-1: DC ELECTRICAL SPECIFICATIONS**

Electrical Characteristics: Unless otherwise indicated, $T_A = +25^\circ C$ , $V_{DD} = +2.5V$ to $+5.5V$ , $V_{SS} = GND$ , $V_{CM} = V_{DD}/3$ , $V_{OUT} \approx V_{DD}/2$ , $V_L = V_{DD}/2$ , $R_L = 2\text{k}\Omega$ to $V_L$ and $CS = V_{SS}$ (refer to <a href="#">Figure 1-2</a> ).						
Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>Input Offset</b>						
Input Offset Voltage	$V_{OS}$	-8	$\pm 1.8$	+8	mV	
Input Offset Voltage Drift	$\Delta V_{OS}/\Delta T_A$	—	$\pm 2.0$	—	$\mu V/\text{ }^\circ C$	$T_A = -40^\circ C$ to $+125^\circ C$
Power Supply Rejection Ratio	PSRR	61	76	—	dB	
<b>Input Current and Impedance</b>						
Input Bias Current	$I_B$	—	4	—	pA	
Across Temperature	$I_B$	—	100	—	pA	$T_A = +85^\circ C$
Across Temperature	$I_B$	—	1500	5,000	pA	$T_A = +125^\circ C$
Input Offset Current	$I_{OS}$	—	$\pm 2$	—	pA	
Common Mode Input Impedance	$Z_{CM}$	—	$10^{13}  9$	—	$\Omega  pF$	
Differential Input Impedance	$Z_{DIFF}$	—	$10^{13}  2$	—	$\Omega  pF$	
<b>Common Mode</b>						
Common Mode Input Voltage Range	$V_{CMR}$	$V_{SS} - 0.3$	—	$V_{DD} - 1.3$	V	(Note 1)
Common Mode Rejection Ratio	CMRR	63	78	—	dB	$V_{DD} = 2.5V$ , $V_{CM} = -0.3$ to $1.2V$
	CMRR	66	81	—	dB	$V_{DD} = 5.5V$ , $V_{CM} = -0.3$ to $4.2V$
<b>Open Loop Gain</b>						
DC Open Loop Gain (large signal)	$A_{OL}$	88	115	—	dB	$V_{DD} = 2.5V$ , $V_{OUT} = 0.3V$ to $2.2V$
	$A_{OL}$	94	124	—	dB	$V_{DD} = 5.5V$ , $V_{OUT} = 0.3V$ to $5.2V$
<b>Output</b>						
Maximum Output Voltage Swing	$V_{OL}, V_{OH}$	$V_{SS} + 20$	—	$V_{DD} - 20$	mV	$V_{DD} = 2.5V$ , $G = +2$ , $0.5V$ Input Overdrive
	$V_{OL}, V_{OH}$	$V_{SS} + 40$	—	$V_{DD} - 40$	mV	$V_{DD} = 5.5V$ , $G = +2$ , $0.5V$ Input Overdrive
Output Short Circuit Current	$I_{SC}$	$\pm 40$	$\pm 85$	$\pm 130$	mA	$V_{DD} = 2.5V$ (Note 2)
	$I_{SC}$	$\pm 35$	$\pm 70$	$\pm 110$	mA	$V_{DD} = 5.5V$ (Note 2)
<b>Power Supply</b>						
Supply Voltage	$V_{DD}$	2.5	—	5.5	V	
Quiescent Current per Amplifier	$I_Q$	1.2	2.5	3.6	mA	No Load Current

Note 1: See [Figure 2-5](#) for temperature effects.

2: The  $I_{SC}$  specifications are for design guidance only; they are not tested.

<b>CS Dynamic Specifications</b>						
$\overline{CS}$ Input Hysteresis	$V_{HYST}$	—	0.25	—	V	
$\overline{CS}$ High to Amplifier Off Time (output goes High-Z)	$t_{OFF}$	—	200	—	ns	$G = +1\text{ V/V}$ , $V_L = V_{SS}$ $\overline{CS} = 0.8V_{DD}$ to $V_{OUT} = 0.1(V_{DD}/2)$
$\overline{CS}$ Low to Amplifier On Time	$t_{ON}$	—	2	10	$\mu\text{s}$	$G = +1\text{ V/V}$ , $V_L = V_{SS}$ , $\overline{CS} = 0.2V_{DD}$ to $V_{OUT} = 0.9(V_{DD}/2)$

**TABLE 1-4: TEMPERATURE SPECIFICATIONS**

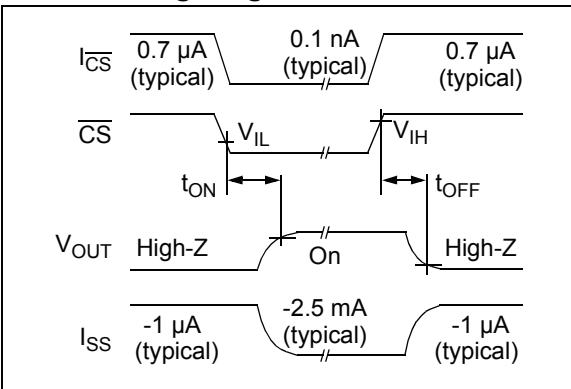

**Electrical Characteristics:** Unless otherwise indicated, all limits are specified for:  $V_{DD} = +2.5V$  to  $+5.5V$ ,  $V_{SS} = GND$ .

Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>Temperature Ranges</b>						
Specified Temperature Range	$T_A$	-40	—	+125	°C	
Operating Temperature Range	$T_A$	-40	—	+125	°C	(Note 1)
Storage Temperature Range	$T_A$	-65	—	+150	°C	
<b>Thermal Package Resistances</b>						
Thermal Resistance, 5L-SOT-23	$\theta_{JA}$	—	220.7	—	°C/W	
Thermal Resistance, 6L-SOT-23	$\theta_{JA}$	—	190.5	—	°C/W	
Thermal Resistance, 8L-2x3 TDFN	$\theta_{JA}$	—	52.5	—	°C/W	
Thermal Resistance, 8L-3x3 DFN	$\theta_{JA}$	—	60	—	°C/W	(Note 2)
Thermal Resistance, 8L-SOIC	$\theta_{JA}$	—	149.5	—	°C/W	
Thermal Resistance, 10L-3x3 DFN	$\theta_{JA}$	—	57	—	°C/W	(Note 2)
Thermal Resistance, 10L-MSOP	$\theta_{JA}$	—	202	—	°C/W	
Thermal Resistance, 14L-SOIC	$\theta_{JA}$	—	95.3	—	°C/W	
Thermal Resistance, 14L-TSSOP	$\theta_{JA}$	—	100	—	°C/W	
Thermal Resistance, 16L-4x4-QFN	$\theta_{JA}$	—	45.7	—	°C/W	(Note 2)

**Note 1:** Operation must not cause  $T_J$  to exceed Maximum Junction Temperature specification (+150°C).

**2:** Measured on a standard JC51-7, four layer printed circuit board with ground plane and vias.

### 1.3 Timing Diagram

**FIGURE 1-1:** Timing Diagram.

### 1.4 Test Circuits

The circuit used for most DC and AC tests is shown in Figure 1-2. It independently sets  $V_{CM}$  and  $V_{OUT}$ ; see Equation 1-1. The circuit's common mode voltage is  $(V_P + V_M)/2$ , not  $V_{CM}$ .  $V_{OST}$  includes  $V_{OS}$  plus the effects of temperature, CMRR, PSRR and  $A_{OL}$ .

### EQUATION 1-1:

$$\begin{aligned} G_{DM} &= R_F/R_G \\ G_N &= 1 + G_{DM} \\ V_{CM} &= V_P(1 - 1/G_N) + V_{REF}(1/G_N) \\ V_{OST} &= V_{IN-} - V_{IN+} \\ V_{OUT} &= V_{REF} + (V_P - V_M)G_{DM} + V_{OST}G_N \end{aligned}$$

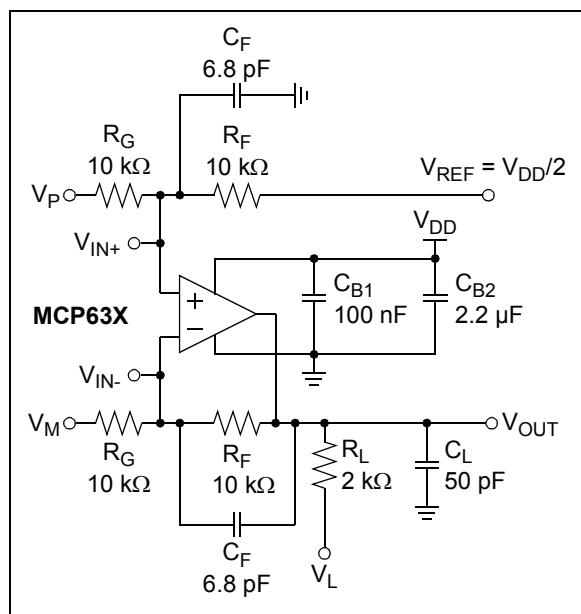

Where:

$$\begin{aligned} G_{DM} &= \text{Differential Mode Gain} & (\text{V/V}) \\ G_N &= \text{Noise Gain} & (\text{V/V}) \\ V_{CM} &= \text{Op Amp's Common Mode Input Voltage} & (\text{V}) \\ V_{OST} &= \text{Op Amp's Total Input Offset Voltage} & (\text{mV}) \end{aligned}$$

## 2.0 TYPICAL PERFORMANCE CURVES

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

**Note:** Unless otherwise indicated,  $T_A = +25^\circ\text{C}$ ,  $V_{DD} = +2.5\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = \text{GND}$ ,  $V_{CM} = V_{DD}/3$ ,  $V_{OUT} = V_{DD}/2$ ,  $V_L = V_{DD}/2$ ,  $R_L = 2\text{k}\Omega$  to  $V_L$ ,  $C_L = 50\text{ pF}$  and  $\overline{CS} = V_{SS}$ .

### 3.1 Analog Outputs

The analog output pins ( $V_{OUT}$ ) are low-impedance voltage sources.

### 3.2 Analog Inputs

The non-inverting and inverting inputs ( $V_{IN^+}$ ,  $V_{IN^-}$ , ... ) are high-impedance CMOS inputs with low bias currents.

### 3.3 Power Supply Pins

The positive power supply ( $V_{DD}$ ) is 2.5V to 5.5V higher than the negative power supply ( $V_{SS}$ ). For normal operation, the other pins are between  $V_{SS}$  and  $V_{DD}$ .

Typically, these parts are used in a single (positive) supply configuration. In that case,  $V_{SS}$  is connected to ground and  $V_{DD}$  is connected to the supply.  $V_{DD}$  will need bypass capacitors.

# MCP631/2/3/4/5/9

---

---

## 3.4 Chip Select Digital Input ( $\overline{CS}$ )

This input ( $\overline{CS}$ ) is a CMOS, Schmitt-triggered input that places the part into a low-power mode of operation.

## 3.5 Exposed Thermal Pad (EP)

There is an internal connection between the exposed thermal pad (EP) and the  $V_{SS}$  pin; they must be connected to the same potential on the printed circuit board (PCB).

This pad can be connected to a PCB ground plane to provide a larger heat sink. This improves the package thermal resistance ( $\theta_{JA}$ ).

## 4.0 APPLICATIONS

The MCP631/2/3/4/5/9 family op amps is manufactured using the Microchip state-of-the-art CMOS process. It is designed for low cost, low power and high speed applications. Its low supply voltage, low quiescent current and wide bandwidth make the MCP631/2/3/4/5/9 ideal for battery-powered applications.

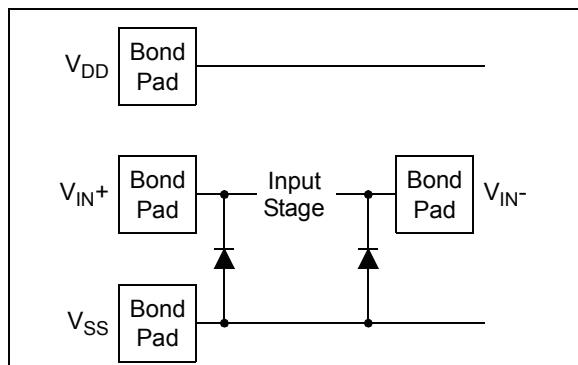

### 4.1 Input

#### 4.1.1 PHASE REVERSAL

The input devices are designed to not exhibit phase inversion when the input pins exceed the supply voltages. Figure 2-38 shows an input voltage exceeding both supplies with no phase inversion.

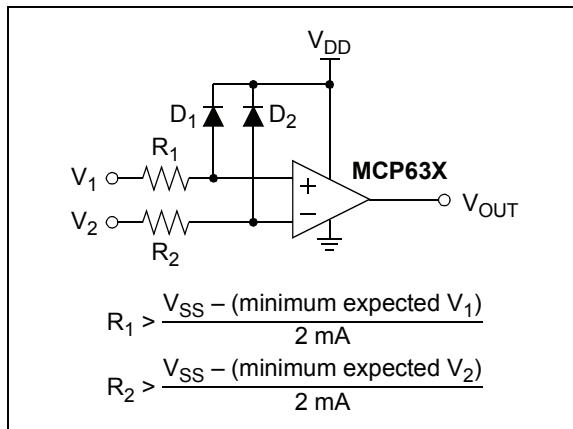

#### 4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

The electrostatic discharge (ESD) protection on the inputs can be depicted as shown in Figure 4-1. This structure was chosen to protect the input transistors, and to minimize input bias current ( $I_B$ ). The input ESD diodes clamp the inputs when they try to go more than one diode drop below  $V_{SS}$ . They also clamp any voltages that go too far above  $V_{DD}$ ; their breakdown voltage is high enough to allow normal operation, and low enough to bypass quick ESD events within the specified limits.

**FIGURE 4-1:** Simplified Analog Input ESD Structures.

In order to prevent damage and/or improper operation of these amplifiers, the circuit must limit the currents (and voltages) at the input pins (see [Section 1.1 “Absolute Maximum Ratings †](#)). Figure 4-2 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins ( $V_{IN}^+$  and  $V_{IN}^-$ ) from going too below ground, and the resistors  $R_1$  and  $R_2$  limit the possible current drawn out of the input pins. Diodes  $D_1$  and  $D_2$  prevent the input pins ( $V_{IN}^+$  and  $V_{IN}^-$ ) from going too far above  $V_{DD}$ , and dump any currents onto  $V_{DD}$ . When implemented as shown, resistors  $R_1$  and  $R_2$  also limit the current through  $D_1$  and  $D_2$ .

**FIGURE 4-2:** Protecting the Analog Inputs.

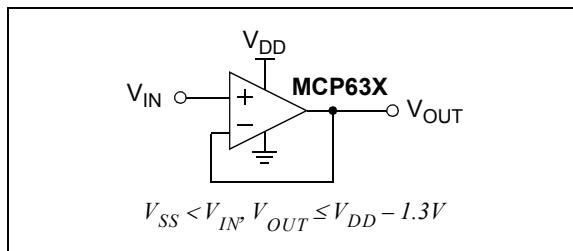

It is also possible to connect the diodes to the left of the resistor  $R_1$  and  $R_2$ . In this case, the currents through the diodes  $D_1$  and  $D_2$  need to be limited by some other mechanism. The resistors then serve as in-rush current limiters; the DC current into the input pins ( $V_{IN}^+$  and  $V_{IN}^-$ ) should be very small.

A significant amount of current can flow out of the inputs (through the ESD diodes) when the common mode voltage ( $V_{CM}$ ) is below ground ( $V_{SS}$ ); see [Figure 2-13](#). Applications that are high-impedance may need to limit the usable voltage range.

#### 4.1.3 NORMAL OPERATION

The input stage of the MCP631/2/3/4/5/9 op amps uses a differential PMOS input stage. It operates at low common mode input voltages ( $V_{CM}$ ), with  $V_{CM}$  between  $V_{SS} - 0.3V$  and  $V_{DD} - 1.3V$ . To ensure proper operation, the input offset voltage ( $V_{OS}$ ) is measured at both  $V_{CM} = V_{SS} - 0.3V$  and  $V_{DD} - 1.3V$ . See [Figure 2-5](#) and [Figure 2-6](#) for temperature effects.

When operating at very low non-inverting gains, the output voltage is limited at the top by the  $V_{CM}$  range ( $< V_{DD} - 1.3V$ ); see [Figure 4-3](#).

**FIGURE 4-3:** Unity Gain Voltage Limitations for Linear Operation.

# MCP631/2/3/4/5/9

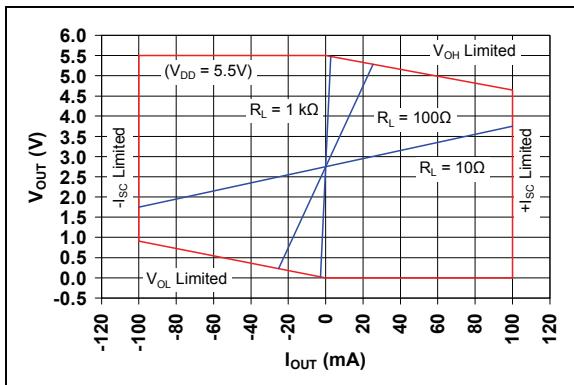

## 4.2 Rail-to-Rail Output

### 4.2.1 MAXIMUM OUTPUT VOLTAGE

The Maximum Output Voltage (see Figure 2-16 and Figure 2-17) describes the output range for a given load. For instance, the output voltage swings to within 50 mV of the negative rail with a 1 kΩ load tied to V<sub>DD</sub>/2.

### 4.2.2 OUTPUT CURRENT

Figure 4-4 shows the possible combinations of output voltage ( $V_{OUT}$ ) and output current ( $I_{OUT}$ ), when V<sub>DD</sub> = 5.5V. I<sub>OUT</sub> is positive when it flows out of the op amp into the external circuit.

**FIGURE 4-4:** Output Current.

### 4.2.3 POWER DISSIPATION

Since the output short circuit current (I<sub>SC</sub>) is specified at  $\pm 70$  mA (typical), these op amps are capable of both delivering and dissipating significant power.

Figure 4-5 shows the quantities used in the following power calculations for a single op amp. R<sub>SER</sub> is 0 Ω in most applications; it can be used to limit I<sub>OUT</sub>. V<sub>OUT</sub> is the op amp's output voltage, V<sub>L</sub> is the voltage at the load, and V<sub>LG</sub> is the load's ground point. V<sub>SS</sub> is usually ground (0V). The input currents are assumed to be negligible. The currents shown are approximately:

### EQUATION 4-1:

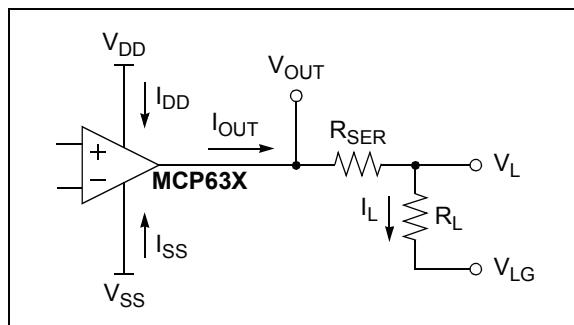

$$I_{OUT} = I_L = \frac{V_{OUT} - V_{LG}}{R_{SER} + R_L}$$

$$I_{DD} \approx I_Q + \max(0, I_{OUT})$$

$$I_{SS} \approx -I_Q + \min(0, I_{OUT})$$

Where:

I<sub>Q</sub> = quiescent supply current

**FIGURE 4-5:** Diagram for Power Calculations.

The instantaneous op amp power (P<sub>OA(t)</sub>), R<sub>SER</sub> power (P<sub>RSER(t)</sub>) and load power (P<sub>L(t)</sub>) are:

### EQUATION 4-2:

$$P_{OA(t)} = I_{DD} (V_{DD} - V_{OUT}) + I_{SS} (V_{SS} - V_{OUT})$$

$$P_{RSER(t)} = I_{OUT}^2 R_{SER}$$

$$P_L(t) = I_L^2 R_L$$

The maximum op amp power, for resistive loads, occurs when V<sub>OUT</sub> is halfway between V<sub>DD</sub> and V<sub>LG</sub> or halfway between V<sub>SS</sub> and V<sub>LG</sub>:

### EQUATION 4-3:

$$P_{OAmax} \leq \frac{\max^2(V_{DD} - V_{LG}, V_{LG} - V_{SS})}{4(R_{SER} + R_L)}$$

The maximum ambient to junction temperature rise ( $\Delta T_{JA}$ ) and junction temperature (T<sub>J</sub>) can be calculated using P<sub>OAmax</sub>, ambient temperature (T<sub>A</sub>), the package thermal resistance ( $\theta_{JA}$ ) found in Table 1-4, and the number of op amps in the package (assuming equal power dissipations):

### EQUATION 4-4:

$$\Delta T_{JA} = P_{OA}(t) \theta_{JA} \leq n P_{OAmax} \theta_{JA}$$

$$T_J = T_A + \Delta T_{JA}$$

Where:

n = number of op amps in package (1, 2)

The power de-rating across temperature for an op amp in a particular package can be easily calculated (assuming equal power dissipations):

### EQUATION 4-5:

$$P_{OAm\text{ax}} \leq \frac{T_{J\text{max}} - T_A}{n \theta_{JA}}$$

Where:

$T_{J\text{max}}$  = absolute maximum junction temperature

Several techniques are available to reduce  $\Delta T_{JA}$  for a given  $P_{OAm\text{ax}}$ :

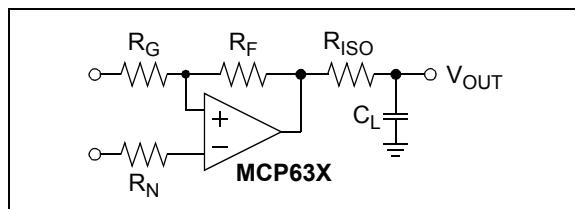

- Lower  $\theta_{JA}$ 
  - Use another package
  - PCB layout (ground plane, etc.)
  - Heat sinks and air flow
- Reduce  $P_{OAm\text{ax}}$ 
  - Increase  $R_L$
  - Limit  $I_{OUT}$  (using  $R_{SER}$ )
  - Decrease  $V_{DD}$

## 4.3 Improving Stability

### 4.3.1 CAPACITIVE LOADS

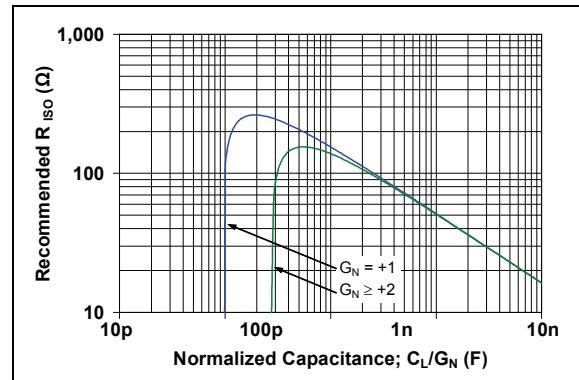

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response, with overshoot and ringing in the step response. A unity gain buffer ( $G = +1$ ) is the most sensitive to capacitive loads, though all gains show the same general behavior.

When driving large capacitive loads with these op amps (e.g.,  $> 20 \text{ pF}$  when  $G = +1$ ), a small series resistor at the output ( $R_{ISO}$  in Figure 4-6) improves the feedback loop's phase margin (stability) by making the output load resistive at higher frequencies. The bandwidth will be generally lower than the bandwidth with no capacitive load.

**FIGURE 4-6:** Output Resistor,  $R_{ISO}$  stabilizes large capacitive loads.

Figure 4-7 gives recommended  $R_{ISO}$  values for different capacitive loads and gains. The x-axis is the normalized load capacitance ( $C_L/G_N$ ), where  $G_N$  is the circuit's noise gain. For non-inverting gains,  $G_N$  and the Signal Gain are equal. For inverting gains,  $G_N$  is  $1+|\text{Signal Gain}|$  (e.g.,  $-1 \text{ V/V}$  gives  $G_N = +2 \text{ V/V}$ ).

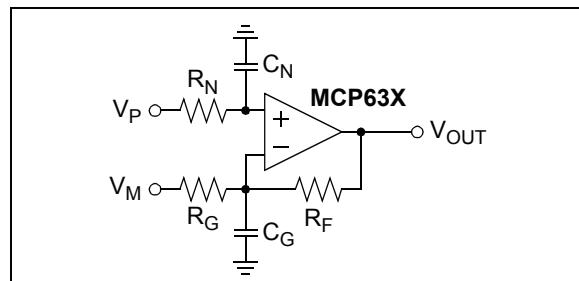

**FIGURE 4-7:** Recommended  $R_{ISO}$  Values for Capacitive Loads.

After selecting  $R_{ISO}$  for your circuit, double check the resulting frequency response peaking and step response overshoot. Modify  $R_{ISO}$ 's value until the response is reasonable. Bench evaluation and simulations with the MCP631/2/3/4/5/9 SPICE macro model are helpful.

### 4.3.2 GAIN PEAKING

Figure 4-8 shows an op amp circuit that represents non-inverting amplifiers ( $V_M$  is a DC voltage and  $V_P$  is the input) or inverting amplifiers ( $V_P$  is a DC voltage and  $V_M$  is the input). The capacitances  $C_N$  and  $C_G$  represent the total capacitance at the input pins; they include the op amp's common mode input capacitance ( $C_{CM}$ ), board parasitic capacitance and any capacitor placed in parallel.

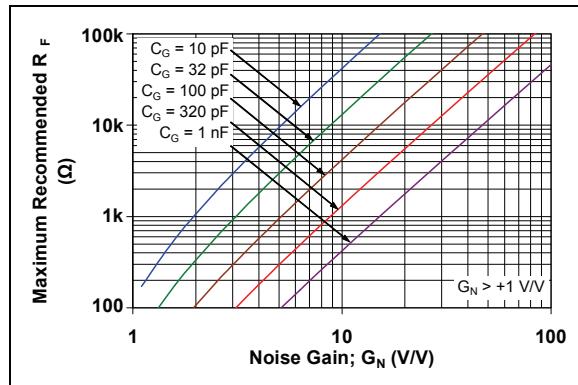

**FIGURE 4-8:** Amplifier with Parasitic Capacitance.

$C_G$  acts in parallel with  $R_G$  (except for a gain of  $+1 \text{ V/V}$ ), which causes an increase in gain at high frequencies.  $C_G$  also reduces the phase margin of the feedback loop, which becomes less stable. This effect can be reduced by either reducing  $C_G$  or  $R_F$ .

# MCP631/2/3/4/5/9

$C_N$  and  $R_N$  form a low-pass filter that affects the signal at  $V_P$ . This filter has a single real pole at  $1/(2\pi R_N C_N)$ .

The largest value of  $R_F$  that should be used depends on noise gain (see  $G_N$  in [Section 4.3.1 “Capacitive Loads”](#)),  $C_G$  and the open-loop gain’s phase shift. [Figure 4-9](#) shows the maximum recommended  $R_F$  for several  $C_G$  values. Some applications may modify these values to reduce either output loading or gain peaking (step response overshoot).

**FIGURE 4-9:** Maximum Recommended  $R_F$  vs. Gain.

[Figure 2-34](#) and [Figure 2-35](#) show the small signal and large signal step responses at  $G = +1 \text{ V/V}$ . The unity gain buffer usually has  $R_F = 0\Omega$  and  $R_G$  open.

[Figure 2-36](#) and [Figure 2-37](#) show the small signal and large signal step responses at  $G = -1 \text{ V/V}$ . Since the noise gain is  $2 \text{ V/V}$  and  $C_G \approx 10 \text{ pF}$ , the resistors were chosen to be  $R_F = R_G = 1 \text{ k}\Omega$  and  $R_N = 500\Omega$ .

It is also possible to add a capacitor ( $C_F$ ) in parallel with  $R_F$  to compensate for the de-stabilizing effect of  $C_G$ . This makes it possible to use larger values of  $R_F$ . The conditions for stability are summarized in [Equation 4-6](#).

## EQUATION 4-6:

Given:

$$G_{N1} = 1 + R_F/R_G$$

$$G_{N2} = 1 + C_G/C_F$$

$$f_F = 1/(2\pi R_F C_F)$$

$$f_Z = f_F(G_{N1}/G_{N2})$$

We need:

$$f_F \leq f_{GBWP}/(2G_{N2}), \quad G_{N1} < G_{N2}$$

$$f_F \leq f_{GBWP}/(4G_{N1}), \quad G_{N1} > G_{N2}$$

## 4.4 MCP631, MCP633, MCP635, and MCP639 Chip Select

The MCP633 is a single amplifier with Chip Select ( $\overline{CS}$ ). When  $\overline{CS}$  is pulled high, the supply current drops to  $1 \mu\text{A}$  (typical) and flows through the  $\overline{CS}$  pin to  $V_{SS}$ . When this happens, the amplifier output is put into a high-impedance state. By pulling  $\overline{CS}$  low, the amplifier is enabled. The  $\overline{CS}$  pin has an internal  $5 \text{ M}\Omega$  (typical) pull-down resistor connected to  $V_{SS}$ , so it will go low if the  $\overline{CS}$  pin is left floating. [Figure 1-1](#), [Figure 2-42](#) and [Figure 2-43](#) show the output voltage and supply current response to a  $\overline{CS}$  pulse.

The MCP635 is a dual amplifier with two  $\overline{CS}$  pins;  $\overline{CS}_A$  controls op amp A and  $\overline{CS}_B$  controls op amp B. These op amps are controlled independently, with an enabled quiescent current ( $I_Q$ ) of  $2.5 \text{ mA}/\text{amplifier}$  (typical) and a disabled  $I_Q$  of  $1 \mu\text{A}/\text{amplifier}$  (typical). The  $I_Q$  seen at the supply pins is the sum of the two op amps'  $I_Q$ ; the typical value for the MCP635's  $I_Q$  will be  $2 \mu\text{A}$ ,  $2.5 \text{ mA}$  or  $5 \text{ mA}$  when there are 0, 1 or 2 amplifiers enabled, respectively.

The MCP639 is a quad amplifier with two  $\overline{CS}$  pins;  $\overline{CS}_B$  controls op amp B and  $\overline{CS}_D$  controls op amp D.

## 4.5 Power Supply

With this family of operational amplifiers, the power supply pin ( $V_{DD}$  for single supply) should have a local bypass capacitor (i.e.,  $0.01 \mu\text{F}$  to  $0.1 \mu\text{F}$ ) within 2 mm for good high frequency performance. Surface mount, multilayer ceramic capacitors, or their equivalent, should be used.

These op amps require a bulk capacitor (i.e.,  $2.2 \mu\text{F}$  or larger) within 50 mm to provide large, slow currents. Tantalum capacitors, or their equivalent, may be a good choice. This bulk capacitor can be shared with other nearby analog parts as long as crosstalk through the supplies does not prove to be a problem.

## 4.6 High Speed PCB Layout

These op amps are fast enough that a little extra care in the PCB (Printed Circuit Board) layout can make a significant difference in performance. Good PC board layout techniques will help you achieve the performance shown in the specifications and Typical Performance Curves; it will also help you minimize EMC (Electro-Magnetic Compatibility) issues.

Use a solid ground plane. Connect the bypass local capacitor(s) to this plane with minimal length traces. This cuts down inductive and capacitive crosstalk.

Separate digital from analog, low speed from high speed, and low power from high power. This will reduce interference.

Keep sensitive traces short and straight. Separate them from interfering components and traces. This is especially important for high frequency (low rise time) signals.

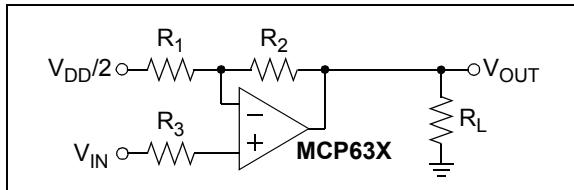

Sometimes, it helps to place guard traces next to victim traces. They should be on both sides of the victim trace, and as close as possible. Connect guard traces to ground plane at both ends, and in the middle for long traces.

Use coax cables, or low inductance wiring, to route signal and power to and from the PCB. Mutual and self inductance of power wires is often a cause of crosstalk and unusual behavior.

## 4.7 Typical Applications

### 4.7.1 POWER DRIVER WITH HIGH GAIN

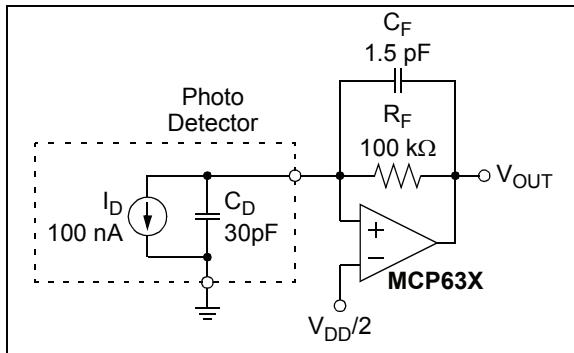

**Figure 4-10** shows a power driver with high gain ( $1 + R_2/R_1$ ). The MCP631/2/3/4/5/9 op amp's short circuit current makes it possible to drive significant loads. The calibrated input offset voltage supports accurate response at high gains.  $R_3$  should be small, and equal to  $R_1||R_2$ , in order to minimize the bias current induced offset.

**FIGURE 4-10:** Power Driver.

### 4.7.2 OPTICAL DETECTOR AMPLIFIER

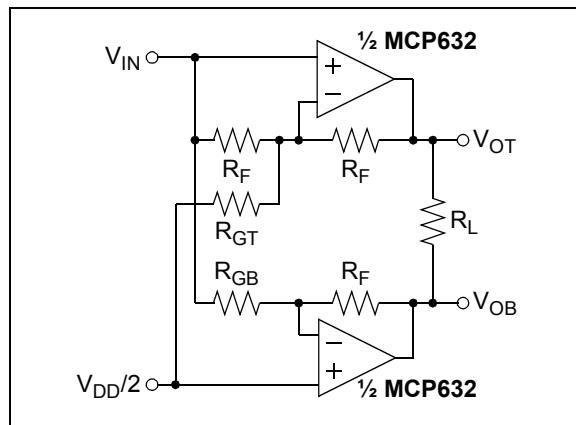

**Figure 4-11** shows a trans-impedance amplifier, using the MCP63X op amp, in a photo detector circuit. The photo detector is a capacitive current source.  $R_F$  provides enough gain to produce 10 mV at  $V_{OUT}$ .  $C_F$  stabilizes the gain and limits the trans-impedance bandwidth to about 1.1 MHz.  $R_F$ 's parasitic capacitance (e.g., 0.2 pF for a 0805 SMD) acts in parallel with  $C_F$ .

**FIGURE 4-11:** Trans-impedance Amplifier for an Optical Detector.

### 4.7.3 H-BRIDGE DRIVER

**Figure 4-12** shows the MCP632 dual op amp used as a H-bridge driver. The load could be a speaker or a DC motor.

**FIGURE 4-12:** H-Bridge Driver.

This circuit automatically makes the noise gains ( $G_N$ ) equal, when the gains are set properly, so that the frequency responses match well (in magnitude and in phase). **Equation 4-7** shows how to calculate  $R_{GT}$  and  $R_{GB}$  so that both op amps have the same DC gains;  $G_{DM}$  needs to be selected first.

### EQUATION 4-7:

$$G_{DM} = \frac{V_{OT} - V_{OB}}{V_{IN} - V_{DD}/2} \geq 1 \text{ V/V}$$

$$R_{GT} = \frac{R_F}{(G_{DM}/2) - 1}$$

$$R_{GB} = \frac{R_F}{G_{DM}/2}$$

**Equation 4-8** gives the resulting common mode and differential mode output voltages.

### EQUATION 4-8:

$$\frac{V_{OT} + V_{OB}}{2} = \frac{V_{DD}}{2}$$

$$V_{OT} - V_{OB} = G_{DM} \left( V_{IN} - \frac{V_{DD}}{2} \right)$$

## 5.0 DESIGN AIDS

Microchip provides the basic design aids needed for the MCP631/2/3/4/5/9 family of op amps.

### 5.1 SPICE Macro Model

The latest SPICE macro model for the MCP631/2/3/4/5/9 op amps is available on the Microchip web site at [www.microchip.com](http://www.microchip.com). This model is intended to be an initial design tool that works well in the op amp's linear region of operation over the temperature range. See the model file for information on its capabilities.

Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

### 5.2 FilterLab® Software

Microchip's FilterLab® software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip web site at [www.microchip.com/filterlab](http://www.microchip.com/filterlab), the FilterLab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

### 5.3 Microchip Advanced Part Selector (MAPS)

MAPS is a software tool that helps efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip web site at [www.microchip.com/maps](http://www.microchip.com/maps), the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool, a customer can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for data sheets, purchase and sampling of Microchip parts.

## 5.4 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help customers achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip web site at [www.microchip.com/analog-tools](http://www.microchip.com/analog-tools).

Some boards that are especially useful are:

- MCP6XXX Amplifier Evaluation Board 1
- MCP6XXX Amplifier Evaluation Board 2
- MCP6XXX Amplifier Evaluation Board 3
- MCP6XXX Amplifier Evaluation Board 4
- Active Filter Demo Board Kit
- 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board, P/N SOIC8EV

## 5.5 Application Notes

The following Microchip Application Notes are available on the Microchip web site at [www.microchip.com/appnotes](http://www.microchip.com/appnotes) and are recommended as supplemental reference resources.

- **ADN003:** "Select the Right Operational Amplifier for your Filtering Circuits", DS21821
- **AN722:** "Operational Amplifier Topologies and DC Specifications", DS00722
- **AN723:** "Operational Amplifier AC Specifications and Applications", DS00723
- **AN884:** "Driving Capacitive Loads With Op Amps", DS00884
- **AN990:** "Analog Sensor Conditioning Circuits – An Overview", DS00990
- **AN1228:** "Op Amp Precision Design: Random Noise", DS01228

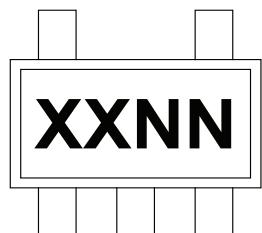

Some of these application notes, and others, are listed in the design guide:

- "Signal Chain Design Guide", DS21825

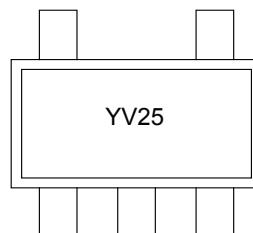

## 6.0 PACKAGING INFORMATION

### 6.1 Package Marking Information

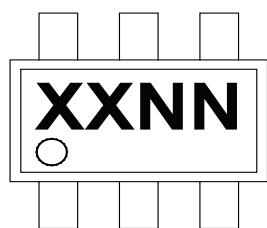

5-Lead SOT-23(MCP631)

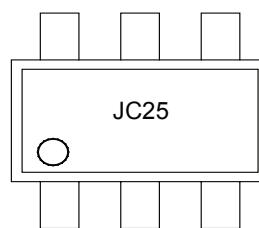

Example:

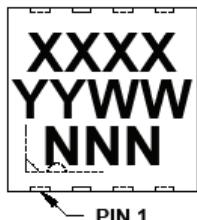

6-Lead SOT-23 (MCP633)

Example:

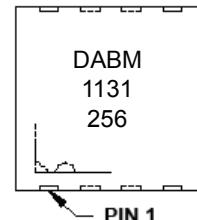

8-Lead DFN (3x3)(MCP632)

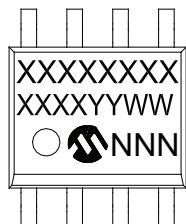

Device	Code
MCP632	DABM

Note: Applies to 8-Lead 3x3 DFN

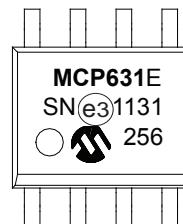

Example

8-Lead SOIC (150 mil) (MCP631, MCP632, MCP633)

Example:

<b>Legend:</b>	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	Pb-free JEDEC designator for Matte Tin (Sn)	
'(e3)		This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

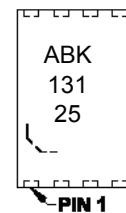

# MCP631/2/3/4/5/9

## Package Marking Information (Continued)

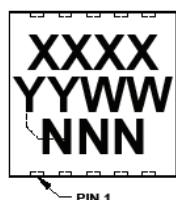

8-Lead TDFN (2 x 3)(MCP631)

Example:

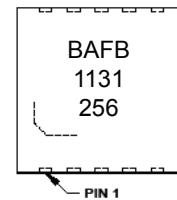

10-Lead DFN (3x3) (MCP635)

Device	Code
MCP635	BAFB

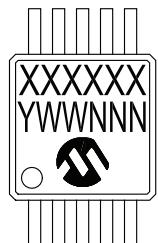

Note: Applies to 10-Lead 3x3 DFN

Example

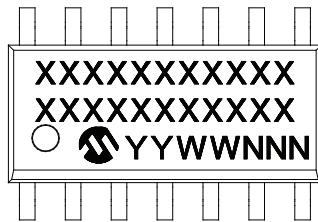

Example:

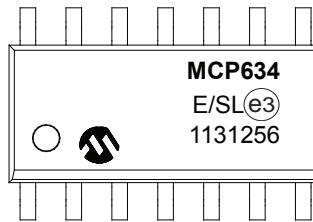

10-Lead MSOP (MCP635)

14-Lead SOIC (.150") (MCP634)

Example

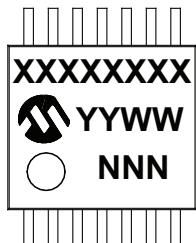

**Legend:**

- XX...X Customer-specific information
- Y Year code (last digit of calendar year)
- YY Year code (last 2 digits of calendar year)
- WW Week code (week of January 1 is week '01')
- NNN Alphanumeric traceability code
- Pb-free JEDEC designator for Matte Tin (Sn)
- '(e3)' This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

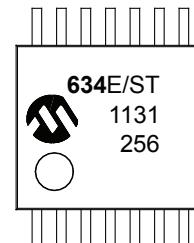

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

## Package Marking Information (Continued)

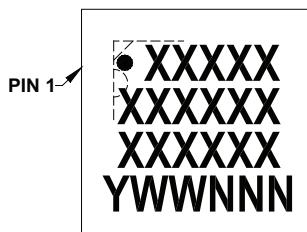

14-Lead TSSOP (**MCP634**)

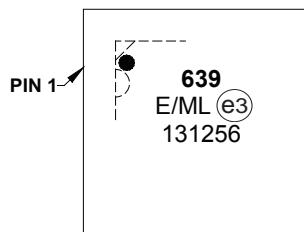

Example

16-Lead QFN (4x4) (**MCP639**)

Example

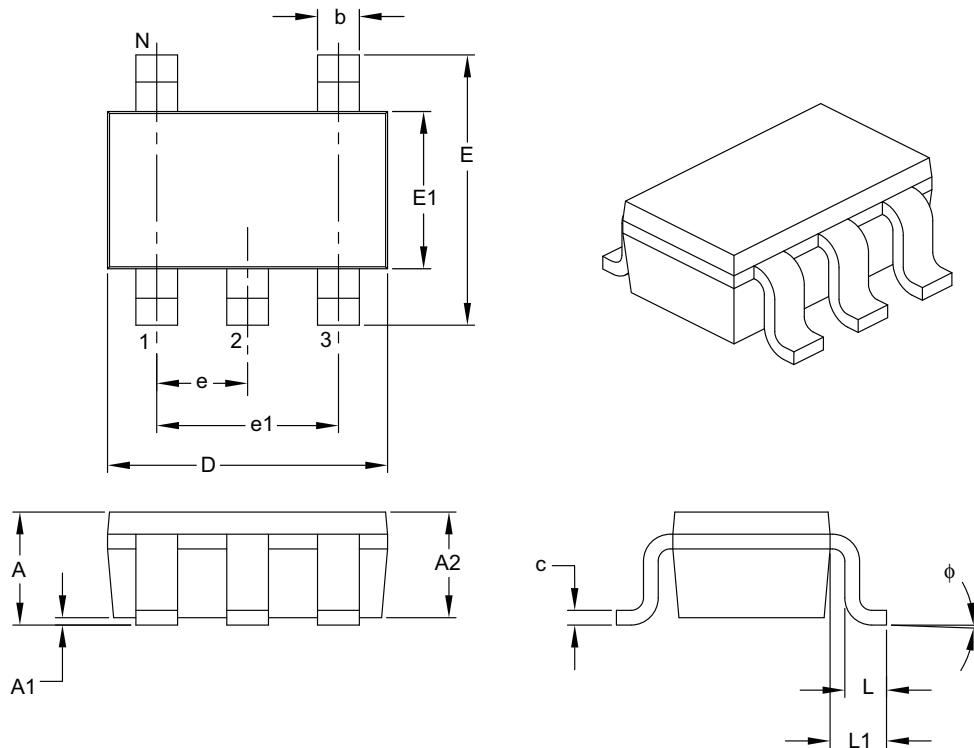

<b>Legend:</b>	XX...X Customer-specific information Y Year code (last digit of calendar year) YY Year code (last 2 digits of calendar year) WW Week code (week of January 1 is week '01') NNN Alphanumeric traceability code (e3) Pb-free JEDEC designator for Matte Tin (Sn) This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.
<b>Note:</b>	In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

## 6-Lead Plastic Small Outline Transistor (CHY) [SOT-23]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

		UNITS		
		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Number of Pins	N		6	
Pitch	e		0.95 BSC	
Outside Lead Pitch	e1		1.90 BSC	
Overall Height	A	0.90	—	1.45
Molded Package Thickness	A2	0.89	—	1.30
Standoff	A1	0.00	—	0.15
Overall Width	E	2.20	—	3.20
Molded Package Width	E1	1.30	—	1.80
Overall Length	D	2.70	—	3.10
Foot Length	L	0.10	—	0.60
Footprint	L1	0.35	—	0.80
Foot Angle	φ	0°	—	30°
Lead Thickness	c	0.08	—	0.26
Lead Width	b	0.20	—	0.51

### Notes:

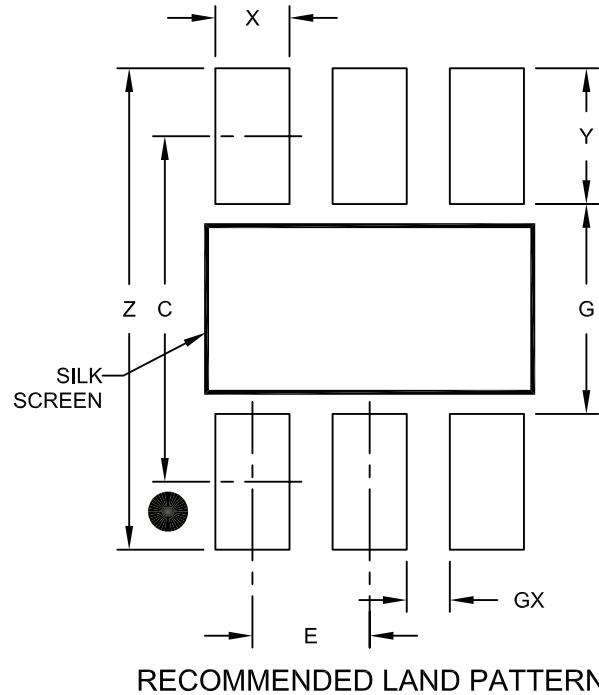

1. Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.127 mm per side.
2. Dimensioning and tolerancing per ASME Y14.5M.

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing C04-028B

## 6-Lead Plastic Small Outline Transistor (CHY) [SOT-23]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Dimension Limits	MILLIMETERS		
	MIN	NOM	MAX
Contact Pitch	E	0.95 BSC	
Contact Pad Spacing	C	2.80	
Contact Pad Width (X6)	X		0.60
Contact Pad Length (X6)	Y		1.10
Distance Between Pads	G	1.70	
Distance Between Pads	GX	0.35	
Overall Width	Z		3.90

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

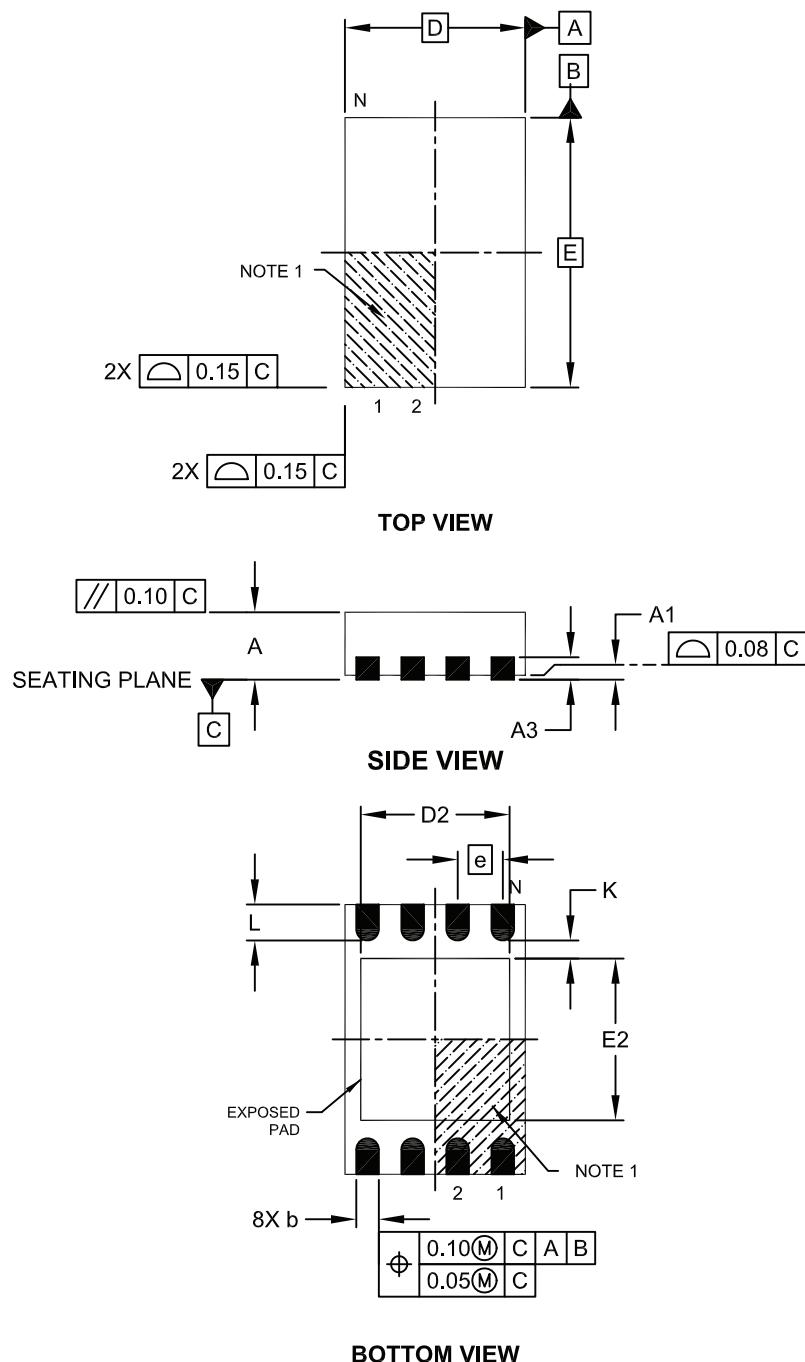

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2028A

# MCP631/2/3/4/5/9

## 8-Lead Plastic Dual Flat, No Lead Package (MN) – 2x3x0.75mm Body [TDFN]

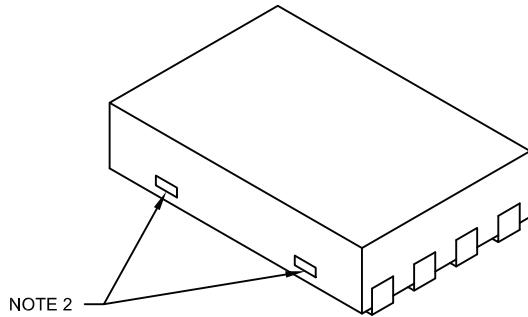

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Microchip Technology Drawing No. C04-129C Sheet 1 of 2

## 8-Lead Plastic Dual Flat, No Lead Package (MN) – 2x3x0.75mm Body [TDFN]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Dimension Limits	Units	MILLIMETERS		
		MIN	NOM	MAX
Number of Pins	N		8	
Pitch	e		0.50 BSC	
Overall Height	A	0.70	0.75	0.80
Standoff	A1	0.00	0.02	0.05
Contact Thickness	A3		0.20 REF	
Overall Length	D		2.00 BSC	
Overall Width	E		3.00 BSC	
Exposed Pad Length	D2	1.20	-	1.60
Exposed Pad Width	E2	1.20	-	1.60
Contact Width	b	0.20	0.25	0.30
Contact Length	L	0.25	0.30	0.45
Contact-to-Exposed Pad	K	0.20	-	-

### Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Package may have one or more exposed tie bars at ends.
3. Package is saw singulated
4. Dimensioning and tolerancing per ASME Y14.5M

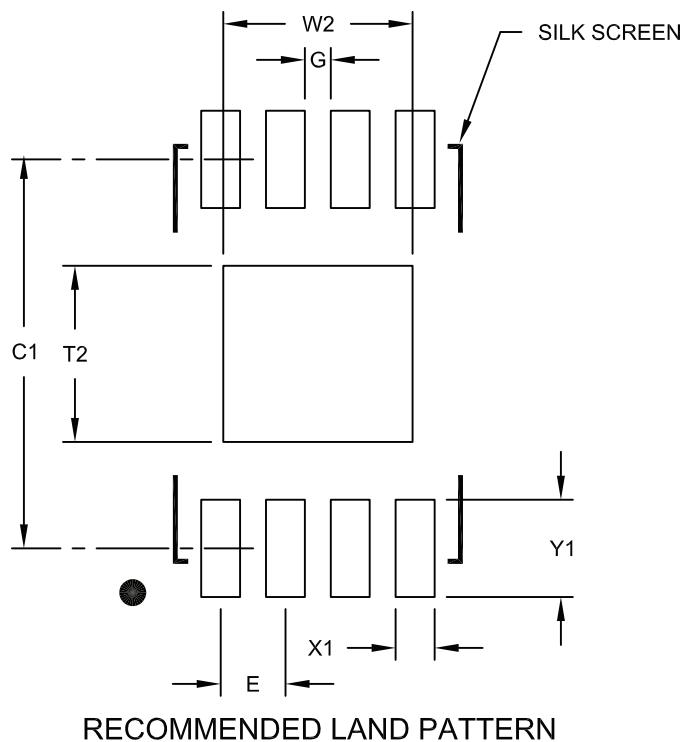

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

REF: Reference Dimension, usually without tolerance, for information purposes only.

# MCP631/2/3/4/5/9

**NOTES:**

## APPENDIX A: REVISION HISTORY

### Revision B (November 2011)

The following is the list of modifications:

1. Added the MCP634 and MCP639 amplifiers to the product family and the related information throughout the document.
2. Added the 2x3 TDFN (8L), SOT23 (5L) package option for MCP631, SOT23 (6L) package option for MCP633, 4x4 QFN (16L) package option for MCP639, SOIC and TSSOP (14L) package options for MCP634 and the related information throughout the document. Updated package types drawing with pin designation for each new package.
3. Updated [Table 1-4](#) to show the temperature specifications for new packages.
4. Updated [Table 3-1](#) to show all the pin functions.
5. Updated **Section 6.0 “Packaging Information”** with markings for the new additions. Added the corresponding SOT23 (5L), SOT23 (6L), TDFN (8L), SOIC, TSSOP (14L), and 4x4 QFN (16L) package options and related information.
6. Updated table description and examples in the Product Identification System section.

### Revision A (August 2009)

- Original Release of this Document.

# MCP631/2/3/4/5/9

---

---

## NOTES:

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.	-X	/XX	Examples:
Device	Temperature Range	Package	
<b>Device:</b>			a) MCP631T-E/OT: Tape and Reel Extended temperature, 5LD SOT-23 package
MCP631		Single Op Amp	b) MCP631T-E/MNY: Tape and Reel Extended temperature, 8LD TDFN package
MCP631T		Single Op Amp (Tape and Reel) (SOIC, SOT-23, TDFN)	c) MCP631T-E/SN: Tape and Reel Extended temperature, 8LD SOIC package
MCP632		Dual Op Amp	d) MCP632T-E/MF: Tape and Reel Extended temperature, 8LD DFN package
MCP632T		Dual Op Amp (Tape and Reel) (DFN and SOIC)	e) MCP632T-E/SN: Tape and Reel Extended temperature, 8LD SOIC package
MCP633		Single Op Amp with CS	f) MCP633T-E/SN: Tape and Reel Extended temperature, 8LD SOIC package
MCP633T		Single Op Amp with CS (Tape and Reel) (SOIC, SOT-23)	g) MCP633T-E/CHY: Tape and Reel Extended temperature, 6LD SOT package
MCP634		Quad Op Amp	h) MCP634T-E/SL: Tape and Reel Extended temperature, 14LD SOIC package
MCP634T		Quad Op Amp (Tape and Reel) (TSSOP and SOIC)	i) MCP634T-E/ST: Tape and Reel Extended temperature, 14LD TSSOP package
MCP635		Dual Op Amp with CS	j) MCP635T-E/MF: Tape and Reel Extended temperature, 10LD DFN package
MCP635T		Dual Op Amp with CS (Tape and Reel) (DFN and MSOP)	k) MCP635T-E/UN: Tape and Reel Extended temperature, 10LD MSOP package
MCP639		Quad Op Amp	l) MCP639T-E/ML: Tape and Reel Extended temperature, 16LD QFN package.
MCP639T		Quad Op Amp (Tape and Reel) (QFN)	
<b>Temperature Range:</b>	E	= -40°C to +125°C	
<b>Package:</b>	OT	= Plastic Small Outline (SOT-23), 5-lead	
	CHY	= Plastic Small Outline (SOT-23), 6-lead	
	MNY	= Plastic Dual Flat, No Lead (2x3 TDFN), 8-lead	
	MF	= Plastic Dual Flat, No Lead (3x3 DFN), 8-lead, 10-lead	
	SN	= Plastic Small Outline (3.90 mm), 8-lead	
	UN	= Plastic Micro Small Outline (MSOP), 10-lead	
	SL	= Plastic Small Outline, Narrow, (3.90 mm SOIC), 14-lead	
	ST	= Plastic Thin Shrink Small Outline, (4.4 mm TSSOP), 14-lead	
	ML	= Plastic Quad Flat, No Lead Package (4x4 QFN), (4x4x0.9 mm), 16-lead

**NOTES:**

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM  
CERTIFIED BY DNV  
= ISO/TS 16949:2009 =**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
